

Paper pallets

Fully Customizable

Products can be designed specifically for individual applications

Cost-effective Solution

75% lighter than other products to reduce transportation costs

Highly Sustainable

Made from renewable resources and 100% recyclable

Internationally Compliant

Made from naturally sanitary materials exempt from ISPM-15 certification

Paper pallets

Paper pallets, manufactured using corrugated, honeycomb or a combination of both, are ideal for one-way shipping applications. Customizable to a variety of sizes and styles, paper pallets are nearly 75% lighter than wood or plastic, making them a durable, yet cost-effective solution for shipping products.

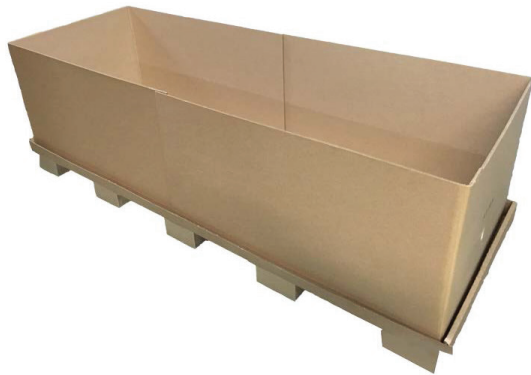

Features and benefits

■ Easier to handle

Unlike wood pallets, paper pallets are free from splinters and don't use nails in their construction, making them easier to handle in the warehouse and during the distribution cycle.

■ More cost-effective

From its lighter weight to its unique design that eliminates the need for ancillary product protection like slip sheets, paper pallets are more cost effective than wood or other pallet systems.

Paper pallet options

■ 2-way

Designed to be used for applications where forklift entry is only necessary from either side, 2-way pallets are a durable and less expensive option than customized options.

■ 4-way

An economical alternative to custom pallets, 4-way pallets allow maximum flexibility within a distribution or storage environment and provide for better utilization in transit.

■ Hybrid

Made from corrugated and honeycomb, hybrid pallets provide rigidity and stability for heavy loads.

■ Honeycomb

With customization possibilities, honeycomb pallets provide durability for any application.

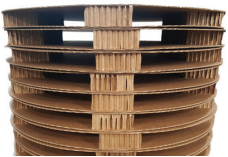

■ Corrugated

Excellent for heavy loads, corrugated pallets hold up well in rigorous shipping and warehouse environments.

■ Round

Designed for round and cylindrical applications, round pallets are ideal for items like fabric that need to ship on end.

■ Low Profile

Shorter and lighter than standard pallets, low profile pallets can support heavy loads, but enable more product to be shipped with less storage space.

■ Specialty

Designed to fit loads that do not conform to standard pallet sizes and shapes, specialty pallets use a variety of components to create an optimal shipping solution.
